

Storage/SAN Compatibility Guide

Last Updated: September 1, 2019

[For more information go to vmware.com.](http://www.vmware.com)

Introduction

VMware ESX software has been tested and deployed in a variety of storage network environments. This guide describes the storage devices currently tested by VMware and its storage partners.

ESX, ESXi Embedded and ESXi Installable are equivalent products from a storage compatibility perspective. In this guide we only explicitly list ESX compatibility information. If a product is listed as supported for ESX, the product is also supported for ESXi Embedded and ESXi Installable corresponding versions.

Note: ESXi does not support Boot From SAN (Fiber Channel or iSCSI), for all products.

If you are having a technical issue with 3rd party HW/SW and it is not found on this list, please refer to our 3rd Party HW/SW support policy at <http://www.vmware.com/support/policies/ThirdParty.html>.

VMware works closely with each of its OEMs to drive towards mutual support of ESX at the time of announcement. Due to different product release cycles, levels of testing, and OEM agreements, not all OEM devices will be supported at the general availability date of a new version of ESX. We recommend contacting the OEM vendor for the best information on when their device is planned to be certified with Virtual Infrastructure.

For further details about array firmware, storage product configurations and best practices, please contact the storage vendor.

NOTE: The use of an external enclosure, or JBOD connected to a supported SAS/SCSI controller in a supported server is supported, as long as there is no disk sharing among multiple servers or SAS/SCSI cards.

There are several items on the ESX 2.5.x SAN Compatibility Guide (http://www.vmware.com/pdf/esx_SAN_guide.pdf) that are not on this 3.x list. Please contact your storage vendors for plans regarding these items.

Windows Clustering (MSCS) with ESX 3.0.x

Windows Clustering refers Cluster Services in Windows 2003 and 2000 in a shared disk configuration between two virtual machines or a virtual machine and a physical system. Such clustering is certified only with a subset of arrays listed in this guide.

Windows Clustering (MSCS) with ESX 3.5.x

MSCS is supported with ESX 3.5 with both 32 bit and 64 bit VMs running Windows 2003. Only 4Gb HBAs are supported with MSCS and ESX 3.5. Before installing VMware ESX 3.5 software with your storage array, please examine the lists on the following pages to find out whether your array and configuration are supported. Please refer to your storage vendor for more information and configuration details. a subset of arrays listed in this guide. It is supported with ESX 3.5 with both 32 bit and 64 bit VMs running Windows 2003. Only 4Gb HBAs are supported with MSCS and ESX 3.5. Before installing VMware ESX 3.5 software with your storage array, please examine the lists on the following pages to find out whether your array and configuration are supported. Please refer to your storage vendor for more information and configuration details.

Fibre Channel SANs

For Fibre Channel SANs, if listed, VMware supports the following configuration, unless footnoted otherwise:

- * **Basic Connectivity** - The ability of ESX 3.x hosts to recognize and interoperate with the storage array. This configuration does not allow for multipathing or any type of failover.
- * **Multipathing** - The ability of ESX 3.x hosts to handle multiple paths to the same storage device.
- * **HBA Failover** - In this configuration, the ESX 3.x host is equipped with multiple HBAs connecting to one or more SAN switches. The server is robust to HBA and switch failure only.
- * **Storage Port Failover** - In this configuration, the ESX 3.x host is attached to multiple storage ports and is robust to storage port failures.
- * **Boot from SAN** - In this configuration, the ESX 3.x host boots from a LUN stored on the SAN rather than a local disk.
- * **Direct Connect** - In this configuration, the ESX 3.x host is directly connected to the array (that is, no switch between HBA and the array). Clustering is not supported in this configuration.

NOTE: Windows Clustering (MSCS) support applies to Windows 2000 SP4, Windows 2003 RTM, SP 1, R2 and SP 2. For ESX version requirements for these operating systems in cluster environment, please refer to <http://kb.vmware.com/kb/2021>. Clustering is supported only with a limited set of HBAs; please refer to the I/O Compatibility Guide (http://www.vmware.com/pdf/vi3_io_guide.pdf) for the list of HBAs not supported with Windows Clustering.

NOTE: MSCS is not supported, unless footnoted.

NOTE: MSCS is not supported for Direct Connect.

NOTE: Only footnoted storage arrays are supported with Brocade 415 and 425 HBAs.

NOTE: Unless otherwise footnoted, all fibre channel arrays are supported with both 2Gb and 4Gb FC HBAs on ESX

NOTE: For ESX 3.5 U2 onwards unless otherwise footnoted, all fibre channel arrays are supported with 2Gb, 4Gb and 8Gb FC HBAs on ESX.

NOTE: For devices with external SAN storage support, please refer to Storage Virtualization Device (SVD).

NOTE: Unless otherwise noted, all fibre channel storage products are supported in a boot from SAN configuration.

Storage Virtualization Device (SVD)

VMware supports Storage Virtualization Devices (SVD) with ESX 3.0.2 or later.

- * Backend storage arrays must be listed on both the ESX 3.x Storage/SAN Compatibility Guide and the SVD Vendor supported list.
- * Do not share the same LUN of the backend storage array between SVD and any other host.
- * Only devices that are listed with Array Type SVD are allowed to connect to external Fibre Channel SAN storages.
- * Only Fibre Channel protocol from SVD device to ESX is supported.

Storage Arrays supported with FCoE CNAs

Fibre Channel Over Ethernet Converged (FCoE) Network Adapters (CNAs) can be concurrently connected to Fibre Channel Fabrics and Ethernet networks, through FCoE capable switches. Certified Fibre Channel arrays will be listed soon. Only the Fibre Channel arrays that will be listed with this array type are certified to work and supported with FCoE CNAs. CNAs are not yet supported to connect with iSCSI and NFS storage arrays.

Network Attached Storage

The following Linux distributions support network attached storage when used with ESX 3.x software:

- * Red Hat Enterprise Linux 5 NFS Server (Update 2).
- * Red Hat Enterprise Linux 3 NFS Server (Update 5).
- * Fedora Core 4 NFS Server (2.6.12-1.1456_FC4.9550smp).
- * Fedora Core 6 NFS Server (2.6.18-1.2798.fc6 #1 SMP) for ESX 3.5 only.

NOTE: Windows Clustering (MSCS) is not supported with NAS.

iSCSI

VMware supports connections to iSCSI arrays using either the software initiator in the kernel or a hardware initiator (iSCSI HBA). Please refer to the I/O Compatibility Guide for a list of hardware initiators that can be used with ESX.

The following maximums are in place when using iSCSI arrays with ESX hosts:

- * Number of HBAs - software (1); hardware (1 dual port or 2 single port)
- * Maximum number of targets - both software and hardware initiator (64)
- * Number of LUNs both software and hardware initiator (254)
- * Number of paths to storage - software (4); hardware (8)

For iSCSI storage with the software initiator over a supported NIC, if listed, VMware supports the following configuration, unless footnoted otherwise:

- * iSCSI Base Connectivity - The ability of an ESX host to recognize the target and interoperate with it.
- * SP failover - In this configuration the ESX host is attached to multiple ports and is robust to storage port failover
- * NIC failover for software initiator - If the Ethernet adapters are teamed and one fails, the other one takes over. Both adapters must be connected to the same physical switch and be on the same subnet (both NICs and iSCSI storage ports).

For iSCSI storage with hardware initiators, if listed, VMware supports the following configuration, unless footnoted otherwise:

- * iSCSI Base Connectivity - The ability of an ESX host to recognize the target over an iSCSI HBA and interoperate with it.
- * SP failover - In this configuration, ESX host is attached to multiple ports over an iSCSI HBA and is robust to storage port failover.
- * Boot from iSCSI - In this configuration, ESX hosts boot from the target iSCSI array rather than from a local disk.
- * iSCSI hardware initiator failover - The ESX host is equipped with multiple hardware initiators and is robust to hardware initiator failover.

NOTE: Windows Clustering is not supported with iSCSI.

NOTE: Software initiated iSCSI is supported fully in ESX 3.0 and later releases. Hardware initiated iSCSI is supported in experimental mode only in ESX 3.0. It is supported fully in ESX 3.0.1 with iSCSI arrays that have been qualified/certified for use with the hardware initiators.

SAS Arrays

For SAS Arrays, if listed, VMware supports the following configuration, unless footnoted otherwise:

- * Basic Connectivity - The ability of ESX 3.5 hosts to recognize and interoperate with the storage array. This configuration does not allow for multipathing, any type of failover, or sharing of LUNs between multiple hosts.
- * Direct Connect - In this configuration, the ESX 3.x host is directly connected to the array (that is, no switch between HBA and the array). Windows Clustering is not supported in this configuration.
- * LUN sharing - The ability of multiple ESX 3.x hosts to share the same LUN.
- * Multipathing - The ability of ESX 3.x hosts to handle multiple paths to the same storage device.
- * HBA Failover - In this configuration, the ESX 3.x host is equipped with multiple HBAs connecting directly to the array. The server is robust to HBA failure only.
- * Storage Port Failover - In this configuration, the ESX 3.x host is attached to multiple storage ports on the same array and is robust to storage port failures.

Maximum Storage Specifications Supported

The following system and virtual machine maximums are supported for ESX hosts:

Maximum LUNs per system: 256 (128 during install)

Maximum HBAs per system: 16 ports (4 quad port cards, 8 dual port cards, etc.)

Maximum virtual HBAs per virtual machine: 4

Maximum targets per virtual HBA: 15

Maximum virtual disks per Windows virtual machine: 60

Maximum virtual disks per Linux virtual machine: 60

Maximum number of VMFS file systems per server: 256

Maximum disk space per VMFS: 2TB * # of extents

Maximum file size per VMFS-3 file: Default max file size for VMFS 3 is 256GB (block size of 1MB). This can be configured to a block size of 8MB which will allow a 2TB file.

Maximum number of files per VMFS-3: Supports enough files to hold the maximum number of VMs per VMFS volume supported by ESX 3.0 (typically greater than 30,000 files)

Maximum number of paths per LUN: 32

Maximum number of total paths: 1024

Maximum number of targets per HBA: 15

Minimum VMFS 3 volume size: 1.1 GB

Third-Party Software

Third party backup, replication, and snapshot software is certified and supported by the providers of the software. The ESX 2.5 guide at http://www.vmware.com/pdf/esx25_san_cfg.pdf shows the list of software that was supported with ESX 2.5. Please contact your SAN vendors regarding their plans to support ESX 3.x. As vendors certify software, we will create a list of certified software for ESX 3.x.

Storage Array Device and Model Information

ESX, ESXi Embedded and ESXi Installable are equivalent products from a storage compatibility perspective. In this guide we only explicitly list ESX compatibility information. If a product is listed as supported for ESX, the product is also supported for ESXi Embedded and ESXi Installable corresponding versions.

The detailed lists show actual vendor devices that are either physically tested or are similar to the devices tested by VMware or VMware partners. VMware provides support only for the devices that are listed in this document

Footnotes:

- 1 . Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 2 . For VMFS5 datastores, Space reclamation can be initiated using VMware command line tools. Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 3 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>
- 4 . Storage Array reported block transfer size is used for XCOPY (VAAI) command.
- 5 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas InfoScale product information can be found at: <http://www.symantec.com/veritas-infoscale/>
- 6 . Gaps in lun sequence is not supported by the array.
- 7 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>
- 8 . xxx represents these 2 version numbers 196 & 401.
- 9 . The SRA does not support Dynamic Access Restrictions for failover or testFailover
- 10 . Storage array TP implementation does not set Software thresholds
- 11 . Storage array TP implementation does not set Software threshold.
- 12 . Non disruptive update (NDU) of SP firmware in back end storage arrays has not been tested.
- 13 . XtremIO array doesn't support thick luns.
- 14 . VAAI Thin Provisioning Space Reclamation is not supported.
- 15 . Initiating live Storage vMotion in an ESXi 5.5 SAN cluster might experience failure if the VM contains a RDM device. The failure leads to automatic power-off and service disruption of the VM. Attempts to power on the affected VM could fail due to the file locking failure. Please contact VMware support for assistance to recover from such failures.
- 16 . Veritas Dynamic Multi-Pathing 6.2 for VMware is a multi path plug-in supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas Dynamic Multi-Pathing 6.2 for VMware product information can be found at: <http://www.symantec.com/dynamic-multi-pathing-for-vmware>
- 17 . ESXi does not support automatic storage space reclamation of deleted files/virtual disks.
- 18 . Array does not support Automatic Unmap in ESXi 6.5. Space reclamation can be initiated using VMware command line tools.
- 19 . Mutual CHAP is not supported by the array
- 20 . Array doesn't support thick luns.
- 21 . Thin Provisioning Stun primitive is not supported on the array.
- 22 . Boot from SAN is not supported.
- 23 . Requires custom claim rule see KB <http://kb.vmware.com/kb/2109405>

Footnotes:

- 1 . Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 2 . For VMFS5 datastores, Space reclamation can be initiated using VMware command line tools. Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 3 . Support with HW FCoE only.
- 4 . Storage array TP implementation does not set Software thresholds
- 5 . Storage Array reported block transfer size is used for XCOPY (VAAI) command.
- 6 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas InfoScale product information can be found at: <http://www.symantec.com/veritas-infoscale/>
- 7 . ETERNUS VAAI Plug-in is required to use VAAI in any of the following environment: - When using vSphere 4.1. - When using ETERNUS DX400 series or ETERNUS DX8000 series. (including the case that ETERNUS DX S2 series is used with these models) - When using ETERNUS DX S2 series with firmware versions lower than V10L20.
- 8 . Initiating live Storage vMotion in an ESXi 5.5 SAN cluster might experience failure if the VM contains a RDM device. The failure leads to automatic power-off and service disruption of the VM. Attempts to power on the affected VM could fail due to the file locking failure. Please contact VMware support for assistance to recover from such failures.
- 9 . Veritas Dynamic Multi-Pathing 6.2 for VMware is a multi path plug-in supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas Dynamic Multi-Pathing 6.2 for VMware product information can be found at: <http://www.symantec.com/dynamic-multi-pathing-for-vmware>.
- 10 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>

Footnotes:

- 1 . Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 2 . 1GbE and 10 GbE Storage Interfaces are supported
- 3 . For VMFS5 datastores, Space reclamation can be initiated using VMware command line tools. Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 4 . Storage Array reported block transfer size is used for XCOPY (VAAI) command.
- 5 . This arrays that doesn't support CHAP feature.
- 6 . The array does not support bi-directional CHAP.
- 7 . Storage Concentrator by design only uses one LUN ID, that is LUN 0.
- 8 . Gaps in lun sequence is not supported by the array.
- 9 . Mutual CHAP is not supported by the array
- 10 . Array doesn't support thick luns.
- 11 . VMFS volume grow feature is not supported on this array
- 12 . Boot from SAN is not supported.
- 13 . Array firmware doesn't support XCOPY VAAI primitive.
- 14 . Array support 1GbE, 10GbE and 25GbE iSCSI storage interfaces.
- 15 . Storage array TP implementation does not set Software thresholds
- 16 . Storage array TP implementation does not set Software threshold.
- 17 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas InfoScale product information can be found at: <http://www.symantec.com/veritas-infoscale/>
- 18 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>
- 19 . DPM over IPMI is not supported on this platform with VMware ESXi.
- 20 . VAAI Thin Provisioning Space Reclamation is not supported.
- 21 . Initiating live Storage vMotion in an ESXi 5.5 SAN cluster might experience failure if the VM contains a RDM device. The failure leads to automatic power-off and service disruption of the VM. Attempts to power on the affected VM could fail due to the file locking failure. Please contact VMware support for assistance to recover from such failures.
- 22 . This arrays that doesn't support CHAP feature
- 23 . Array does not support Automatic Unmap in ESXi 6.5. Space reclamation can be initiated using VMware command line tools.
- 24 . VMFS volume grow feature is not supported on this array.
- 25 . Storage array TP implementation does not set Software and Hardware thresholds.

Footnotes:

- 1 . Native clone of small virtual machines (i.e.<2 GB) will see no performance benefit.
- 2 . Cross Volume Cloning is not supported by array.
- 3 . The storage array does not support thick virtual disks; it supports only thin virtual disks.
- 4 . Cross volume cloning is not supported as only one datastore can be created in an array.
- 5 . Storage array supports only one datastore.
- 6 . Partner's VAAINAS plugin supports only single level Native snapshot.
- 7 . Array does not support Kerberos access to NAS datastores
- 8 . IPV6 feature is not certified with this version as ESX5.X does not support IPv6.
- 9 . 1GbE and 10 GbE Storage Interfaces are supported
- 10 . NetApp Data ONTAP 9.2 doesn't support Extended Stats features.
- 11 . NetApp Data ONTAP 8.2.5 7-Mode doesn't support Extended Stats features.
- 12 . Multipathing is not supported by the array.
- 13 . NFS 4.1 Multipath is not supported.
- 14 . NetApp Clustered Data ONTAP 8.2.2 doesn't support Extended Stats features.
- 15 . NetApp Data ONTAP 9.1 does not support Extended Stats.
- 16 . Plug-in is available at <http://portal.hds.com> for download.
- 17 . The Storage array does not support LazyCloning.
- 18 . NetApp Data ONTAP 8.1.4 Cluster-mode doesn't support Extended Stats features.
- 19 . The VAAI-NAS Plugin isilon_nas_vaa_i_plugin v1.2.2-0 does not support Extended Stats feature.
- 20 . NetApp Data ONTAP 8.2 7-Mode doesn't support Extended Stats features.
- 21 . This release of VAAI plugin for NAS does not support clones operation related to zeroed thick, thin and lazy clones.
- 22 . This release of VAAI plug-in for NAS does not support clones operation related to zeroed thick vdisks.
- 23 . Simplivity OmniCube CN-2400 does support cross volume lazy cloning.
- 24 . Lazy clone is not supported due to ext4 file system.
- 25 . Array doesn't support KRB5I.

Footnotes:

- 1 . Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 2 . Storage Array reported block transfer size is used for XCOPY (VAAI) command.
- 3 . For VMFS5 datastores, Space reclamation can be initiated using VMware command line tools. Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 4 . JBOD supported from firmware version 23.13.16.0013 on VRTX through Shared PERC8 External controller.
- 5 . Storage array SVC 7.2 SAS direct attach only support ESXi 5.5 two node cluster.
- 6 . The storage array only supports thin provisioning and does not support thick provisioned LUNs.

Footnotes:

- 1 . Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 2 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>
- 3 . For VMFS5 datastores, Space reclamation can be initiated using VMware command line tools. Refer to KBs <http://kb.vmware.com/kb/2057513> & <http://kb.vmware.com/kb/2014849> for explanation and details on VAAI Thin Provisioning Space Reclamation support.
- 4 . Storage Array reported block transfer size is used for XCOPY (VAAI) command.
- 5 . Storage array TP implementation does not set Software threshold.
- 6 . Support with HW FCoE only.
- 7 . Storage array TP implementation does not set Software thresholds
- 8 . Thin Provisioning is supported beginning with VPLEX 5.5 SP1 for XtremIO arrays only.
- 9 . Please see EMC knowledgebase emc300213 for additional information.
- 10 . Mutual CHAP is not supported by the array
- 11 . ESXi does not support automatic storage space reclamation of deleted files/virtual disks.
- 12 . NetApp Data ONTAP 9.1 does not support Extended Stats.
- 13 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Veritas. Please contact Veritas for any plug-in specific issues (<https://www.veritas.com/support/>). Veritas InfoScale product information can be found at: <https://www.veritas.com/product/storage-management/infoscale-storage.html>
- 14 . Veritas Dynamic Multi-Pathing for VMware is a multi-pathing component of the Veritas InfoScale Family and is supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas InfoScale product information can be found at: <http://www.symantec.com/veritas-infoscale/>
- 15 . For ESXi 5 LUN Datastores on USP/VM arrays which need to be replicated, the VAAI/ATS function needs to be disabled during the time of replication. Please reference KB article: <http://kb.vmware.com/kb/2030416> for VMware commands.
- 16 . Native clone of small virtual machines (i.e.<2 GB) will see no performance benefit.
- 17 . Veritas Dynamic Multi-Pathing 6.1.1 for VMware is a multi path plug-in supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas Dynamic Multi-Pathing 6.1.1 for VMware product information can be found at: <http://www.symantec.com/dynamic-multi-pathing-for-vmware>
- 18 . Veritas Dynamic Multi-Pathing 6.2 for VMware is a multi path plug-in supported directly by Symantec. Please contact Symantec for any plug-in specific issues (<http://www.symantec.com/business/support/index?page=landing&key=59050>). Veritas Dynamic Multi-Pathing 6.2 for VMware product information can be found at: <http://www.symantec.com/dynamic-multi-pathing-for-vmware>
- 19 . NetApp Data ONTAP 8.2.4 7-Mode doesn't support Extended Stats features.
- 20 . NetApp Data ONTAP 8.2.5 7-Mode doesn't support Extended Stats features.
- 21 . Non disruptive update (NDU) of SP firmware is not supported.
- 22 . VAAI Thin Provisioning Space Reclamation is not supported.
