Introduction

VMware Aria Operations delivers intelligent operations management across physical, virtual and cloud infrastructures. It correlates data from applications to storage in a unified, easy-to-use management tool that provides control over performance, capacity and configuration, with predictive analytics driving proactive action and policy-based automation. vRealize Operations Management Packs extend VMware Aria Operations capabilities to adjacent technology domains such as storage, network, compute or application. Customers can download these management packs within vRealize Operations to reduce the number of operation tools within their data center. This provides the ability to form relationships across multiple technologies to pinpoint health, risk and capacity issues. Customers will benefit by having faster root cause problem determination, which greatly improves the operations efficiencies across the entire data center.
